Under the Paris Agreement, nearly every nation of the world agreed to act together to keep global warming below 2 degrees Celsius (°C). Three years ago, President Trump announced that he was withdrawing the U.S. from that agreement.

What if he hadn’t broken our promise? What if we keep global warming below 2 degrees?

In just Florida alone, over the next 50 years we could prevent approximately:

- **101,000** premature deaths
- **40,000** emergency room visits and hospitalizations for cardiovascular and respiratory disease
- **More than 23 million** lost workdays
- **$750 billion** The economic value of these health benefits would exceed $750 billion in Florida.
